

AI: You are an AI assistant that can provide helpful answers using available tools.

If you are unable to answer, you can use the following tools: Time and Wikipedia.

You: Hey my name is Nithin who are you?

AI: Hello Nithin, I am a large language model, trained by Google.

You: And what is RAG in terms of Generative AI?

AI: Retrieval-Augmented Generation (RAG) is an AI technique or framework that improves the accuracy and reliability of generative AI models (like large language models). It does this by allowing them to retrieve and include factual information from external knowledge bases or information retrieval systems, such as search engines and databases.

You: Thanks and can u summarize the chats

AI: The chat began with you introducing yourself as Nithin and asking who I am. I identified myself as a large language model trained by Google.

You then asked about RAG in terms of Generative AI, and I explained it as a technique that improves generative AI models by allowing them to retrieve and include factual information from external knowledge bases.

You: Ok then export the chats
